Technical Skills

- **Programming Languages**: Python, Fortran, C, C++, Bash, R, SQL, Julia, Mathematica
- **Frameworks**: NumPy, Pandas, SciPy, Scikit-Learn, TensorFlow, OpenCV, PyMC, MDTraj, Matplotlib, Numba
- **Software & Tools**: Git, Docker, General Particle Tracer (GPT), GROMACS, LAMMPS, PyMol, ImageJ, Slurm

Work Experience

- **Senior Intern** Jun 2022 – Jun 2023
  Thermo Fisher Scientific Remote
  - ◇ Wrote Python code to automate milling and imaging procedures on dual-beam FIB-SEM systems.
  - ◇ Used Python computer vision libraries such as OpenCV and Skimage for image analysis on FIB and SEM images to perform measurements and data analysis.
  - ◇ Contributed to a software tool (Python) for performing General Particle Tracer (GPT) simulations and data processing/analysis in a Linux HPC environment.
  - ◇ Developed beam sharpness metrics to characterize performance for novel FIB column designs.
  - ◇ Developed Python code to optimize novel FIB column designs, resulting in up to 350% improvement in FIB performance for some applications.
  - ◇ Used Python libraries such as NumPy, SciPy, Pandas, Matplotlib, and Seaborn for data analysis, visualization, and presentation to a team of scientists in order to inform decisions on technology development.

- **Graduate Research Assistant** Sep 2020 – Jun 2022
  University of Oregon Eugene, OR
  - ◇ Developed coarse-grained models of DNA and proteins, and validated models using molecular dynamics simulations (GROMACS and LAMMPS) and Monte Carlo simulations.
  - ◇ Wrote scripts in Python and Bash for performing molecular dynamics simulations using GROMACS and LAMMPS molecular dynamics software on HPC clusters at San Diego Supercomputer Center.
  - ◇ Characterized performance and degree of parallelism of simulation software to determine computational resource requirement on 128 Core/node HPC system.
  - ◇ Developed data analysis tools in Python, Fortran, and C++ for data analysis of ∼10TB of molecular dynamics simulation data.
  - ◇ Used clustering algorithms, such as DBSCAN, to determine coordinate regions for Markov Chain Monte Carlo simulation.
  - ◇ Validated coarse-grained molecular models against statistical models such as principal component analysis (PCA) and time-lagged independent component analysis (t-ICA).
  - ◇ Mentored undergraduate and graduate research assistants on code development, simulation data analysis, and theoretical molecular biophysics.

- **Graduate Teaching Assistant** Mar 2022 - Jun 2022
  University of Oregon Eugene, OR
  - ◇ Instructed tutorials and labs in undergraduate physics courses covering electricity and magnetism, circuitry, and Newtonian mechanics.

- **Library Student Assistant** Sep 2017 - Jun 2022
  University of Oregon Eugene, OR
  - ◇ Provided tutoring for math and science subjects including: algebra, probability and statistics, calculus, differential equations, linear algebra, and computer science.
  - ◇ Assisted library patrons with use of library services and systems.

Education

- **M.S., Physics** Sep 2020 - Jun 2022
  University of Oregon, GPA: 3.92 Eugene, OR
- **B.S., Mathematics and Physics** Sep 2016 - June 2020
  University of Oregon, GPA: 3.83 Eugene, OR
